BOTSWANA SCHOOL OF BUSINESS SCIENCES

MASEDI ELLAH KATIRO-BIDA25-130

PART A

Question 1

(a) The objective of the website is to offer 24/7 cleaning services to people who want their facilities and homes to look clean and sparkling at all times without having to worry and spend much time doing the work themselves.

According to the Digital 2026 :Botswana DataReport mentions that there were 2.09 million individuals using the internet across Botswana at the end of 2025 when online access stood at 81.4 percent and those who were available on social media were 1.40 million equating to 54.4 percent of the total population. This indicates that majority of the local customers use the internet as their first option for contacting what they may need therefore the main aim of this website is to target the online traffic and change it into successful service bookings.

The goals of the business is to:

*Build trust with customers-Customers may really want to see if they can be confident and rely on the brand without wasting their money in something that they would regret later.My brand being Ellah's Cleaning Services will make sure to show pictures and videos of the work to give customers heads up or a clear scope of what it is talking about .As mentioned customers believe in a brand that is open about how it works and gives real customer feedback says (Pernice,Whiteton & Nielsen,2024).

*Make cleaning services bookings easy- Hoang(2025) mentions that web-based booking services help the users with the capability of scheduling services online without relying on manual phone contacts or physically visiting the owner's brand in person.This would allow the potential customers to just log into the websites and place a booking because the website is always online , to put all the needed information and credentials thus being given the feedback in a short period of time.

*Explain prices in detail-The business aim is to give a clear and straightforward information about the different prices of packages and special deals or discounts that are available on weekends. This will make it possible for the customers to choose the package that they prefer or suits them. Some questions that the customers may ask themselves are "Are the products or services within my budget? How much do they cost and what comes with it?(Pernice, Whitenton & Nielsen,2024,p.69)."

*Reduce manual work load- Hoang(2025) argues that digital booking platforms help prevent contradictory manual record keeping and provide a standardized process of customer appointments. This will help the company in monitoring and analyzing customer

behaviour to reduce bottlenecks hence improving the service flow of Ellah's Cleaning Services.

(b)Residents of Gaborone Suburbs-These are people who live in areas such Phakalane, Gaborone North and Block 8.In their daily life's they are mostly busy professionals and have no or less time to clean their homes to the perfection that they want. They have high technical aptitude as a majority of them own internet devices such as mobile phones and computer desktops meaning they are flexible to use the internet to find services such as for cleaning when they are at home or work. To justify this digital approach 81.4% of Batswana were online during the end of 2025 signifying that local residents now use the web as their basic tool for looking service providers (DataReportal, 2026).

*Users with Diverse Accessibility Needs-These are people who have temporary or permanent disabilities such as visual impairments as well as those who have lower illiteracy levels.Under chapter 7 "The Big Bang Theory of Web Design "states that users should be able to know what the website is,what its talking about looking at the contents of the home page.For a visual impaired individual this means that the screen reader should come across a clear heading that is bold enough so they are not left behind guessing the company's purpose. These people have a diverse technical aptitude ranging from those who are highly skilled in using the screen readers to those who have low illiteracy skills (Krug, 2014).

*Commercial Clients-Facilities such as malls and hospitals are very big and would need services that will keep them clean. My brand will concentrate on Marina Hospital and Railpark Mall because that is where high traffic of people are. They have professional technical aptitude as they expect to see a formal, polished website that looks trustworthy.

(c) The website that I will be designing is a Corporate Website. It provides information about my company and its services. Content that I will be designing for users is the service catalog, visual proof of how we clean home and facilities, Interactive and trust content. This is were features such as forms, table prices, customer testimonials and photos will be included

Question 2

*Information Design and Taxonomy-My website will have several pages which are the:

-Home Page-This page will consist of a brief ,short , clear and bold heading summarizing what the brand is about. Samples of pictures will also be shown ,a call to (CTA) button saying book now will be available and directs the customer exactly to the booking page.

-About us-Here I will describe what the company is about in detail, explaining how I came up with the idea of opening it, how I hired people and form a team and our vision, our goal of where we see it in ten years time

-Contact us-All professional platforms that you can reach us through to will be available here such as email, WhatsApp and cellphone number,a feedback form. An embedded google map location indicating were we are based. Frequently asked questions to help customers make decisions before they contact us.

-My services-Prices, cleaning packages, special deals and promotions offered to customers on weekends especially those with diverse accessibility needs. Bootstrap cards will also be used to separate the residential basic/deep cleaning and commercial cleaning.

-Booking Page-After customers decide what they want by looking at the my services page here is where they will visit. They would choose what package they prefer looking at factors such as their budget, if their homes or facilities need thorough cleaning. Specific fields for customers to fill will be included being names ,email, contacts, address ,gender , and service type.
